

- **Title:** Preventing Weightlifting Injuries by Barbell Modifications, Weightlifting Injuries, BME301

- **Date:** 4/4/24 - 4/11/24

- **Problem statement:** Over one million weightlifters each year experience weightlifting injuries that put them in the emergency room. Of these one million, 18-46% are reported to be caused by bench pressing a barbell. Our team's task is to create a marketable system that increases safety for lifting, specifically bench pressing.
- **Brief status update:** We are starting on the final prototype, getting ready for the final deliverables of the semester.
- **Difficulties / advice requests:** No difficulties or advice requests for this coming week.
- **Current design:** After show and tell, the design has been slightly changed from multiple sensors to one sensor that points to the ground due to rotation of a ball bearing system.

- Major team goals for the next week:** Design consultation in TeamLab, start making final prototype.
- Next week's individual goals:** A concise statement of intended action to continue progress on the project - be specific, i.e. what will you research.

Kaden: Finish 3d model of bearing and get printed

Jacob: Assist in fabrication of outside bearing system

Nolan: Tackle display design and fabrication

James: Set up Raspberry Pi microcontroller wireless communication once they arrive from shipping.

- **Previous week's goals and accomplishments:**

Team: Get everything set up and ready to fabricate.

Kaden: Help complete executive summary, ethics in engineering, and find the right supplies to order for the end fabrication.

Jacob: Helped complete the executive summary

Nolan: Obtained display sensor, found velcro to order, worked on ethics assignment as well as executive summary

James: Acquire *Pi Pico W* microcontroller and digital screen.

Activities: a concise accounting of time spent working on the project.
