

Smart Walker

Client: Mr. Daniel Kutschera

Advisor: Prof. Darilis Suarez

Team Members: Nicolas Maldonado, Shreya Venkatesh, Navya Jain, Xicheng Yang

Name	Email	Role
Nicolas Maldonado	namaldonado@wisc.edu	Leader
Shreya Venkatesh	svenkatesh9@wisc.edu	Communicator
Navya Jain	njain52@wisc.edu	BPAG & BWIG
Xicheng Yang	xyang622@wisc.edu	BSAC

Problem statement:

The client, a physical therapist working in neuro-rehabilitation, has several patients who use walkers as transition devices. He needs a smart walker for his patients that can objectively measure gait speed, distance walked, and the weight/force applied through the walker. Data is required by Medicare to demonstrate progress and efficacy, but it can also help improve clinical assessment and motivate patients as they work to reduce device dependence. Currently, quantitative measurements are taken manually, which is time-consuming and incomplete, as there is no way to measure weight-bearing. Two prototypes have been made by modifying an existing walker, but this compromises structural integrity and is not viable for patient testing. The main goal is to develop a safe, attachable assessment device that provides real-time, clinically relevant gait and weight-bearing data for use with standard walkers by clinicians and patients.

Brief status update:

As a team, we spent time researching code for the mmWave radar sensor and other possible distance/speed sensors. We will also be having our client meeting tomorrow to realign our goals and scope for the semester. We are also preparing the changes to make to the product design specification.

Difficulties/advice requests:

Nothing at the moment.

Major team goals for the next week

1. Continue researching programming the current mmWave radar and other distance sensors.
2. Begin working on the Product Design Specification Document
3. Start discussing new design ideas
4. Discuss the updates from the client meeting

Next week's individual goals

Navya:

- Research how to improve distance measurement accuracy in mmWave radar
- Research non-linear distance measurement method

Shreya:

- Research mmWave radar configuration code
- Update product design specification

Nicolas:

- Background research

Xicheng:

- Review all codes from last semester
- Research on possible non-linear distance measurement solutions
