Progress Report - Week 16

Title: Stabilizer Device for Intra-Cardiac Echocardiography (ICE) to Assist Structural Heart Interventional Procedures

Client: Dr. Amish Raval Advisor: Dr. Darilis Suarez-Gonzalez Team: Noah Hamrin (Leader) Max Aziz (Communicator) Kaden Kafar (BWIG & BPAG) Sara Morehouse (BSAC)

Date: February 27, 2025

Problem Statement:

Intracardiac echocardiography (ICE) is a technique commonly used during catheter-based interventional procedures to treat congenital heart disease, valvular heart disease and myocardial disease. Typically, the ICE catheter is advanced into the right atrial from a femoral vein, where it is positioned for imaging purposes. A separate catheter to perform the interventional procedure such as a transseptal needle or Watchman left atrial appendage occluder delivery system is then introduced. Many times, the ICE catheter drifts out of place, the imaging perspective is lost and the ICE catheter needs to be readjusted. Therefore, there exists a need for a simple re-sterilizable device to stabilize a variety of commercially available ICE catheters during interventional procedures. The device must prevent movement of the ICE catheter so that it does not migrate out of place when in use.

Brief Status Update:

This week the team worked on the preliminary report and the CNC fabrication process.

Difficulties / Advice Requests:

N/A at this time.

Current Design:

The Body Weight Holder design consists of 3 main components: the base plate, the shaft, and the top holder. The base plate will be welded to the bottom part of the shaft, and the top part of the shaft will be inserted into the bottom shaft and held in place with a quick release clamp. This clamp will allow for adjustable height. The top part of the shaft includes a circular base that will have magnets, which will attach to the top holder component. The magnets will allow the top holder to be secured to the shaft through a surgical sterile drape. Additionally, the top holder will be lined with rubber on the internal surface to provide a secure hold on the catheter handle. There will also be rubber straps that secure over the handle of the catheter.

| Item | Description | Manufac- turer | Mft Pt# | Vendor | Date | # | Cost Each | Total | Link |

Major team goals for the next week:

- Reserve a CNC mill and complete CNC fabrication of middle part
- Complete or prepare for welding portion of fabrication

Next week's individual goals:

- Sara:
 - Assist with fabrication and assembly of device
 - Work on updating testing protocols
- Max:
 - Once CNC is done, I can help with the weld
- Noah:
 - Reserve Trak 2-OP mill and fabricate middle part
- Kaden:
 - Work on welding metal prototype

Previous week's goals and accomplishments:

• Prepare toolpaths for CNC fabrication

Activities:

| Name | Date | Activity | Time (h) | Week Total (h) | Sem. Total (h) |
|-------|---------------------|--|-------------|----------------------|----------------------|
| Sara | 2/26,2/27 | Worked on preliminary journal article report | 3 | 3 | 8 |
| Max | 2/27 | I worked on preliminary deliverables | 3 | 3 | 9 |
| Noah | 2/23, 2/24, 2/25 | Learned how to use Mastercam program, met with TeamLab to discuss fabrication plans, and prepared toolpaths for CNC mill | 4 | 4 | 11 |
| Kaden | 2/27 | I worked on preliminary deliverables | 2 | 2 | 7 |
