

# **An open source imaging/ therapy platform for small animals**

Jay Sekhon (Leader)  
Jon Seaton (Communicator/BSAC)  
Ryan Kimmel (BWIG)

Client: Robert Jeraj & Rock Mackie  
Advisor: Dr. Thomas Yen

# Overview

- **Background**
  - Previous Work
  - Project Plan
- **System Design**
- **Design Matrices**
- **Mechanical Design**
- **Timeline & Future Work**

# Background-Previous Work

- Project initiated in January 2010
- Open Source Concept & Morgridge Institute
- System Requirements & Specs: Spring 2010
  - Customer Requirements
  - Design Specifications
  - SolidWorks Model, v 1.0
- OSMD Business Plan: Summer 2010
  - Customer Requirements
  - Business Plan
  - SolidWorks Model, v 2.0

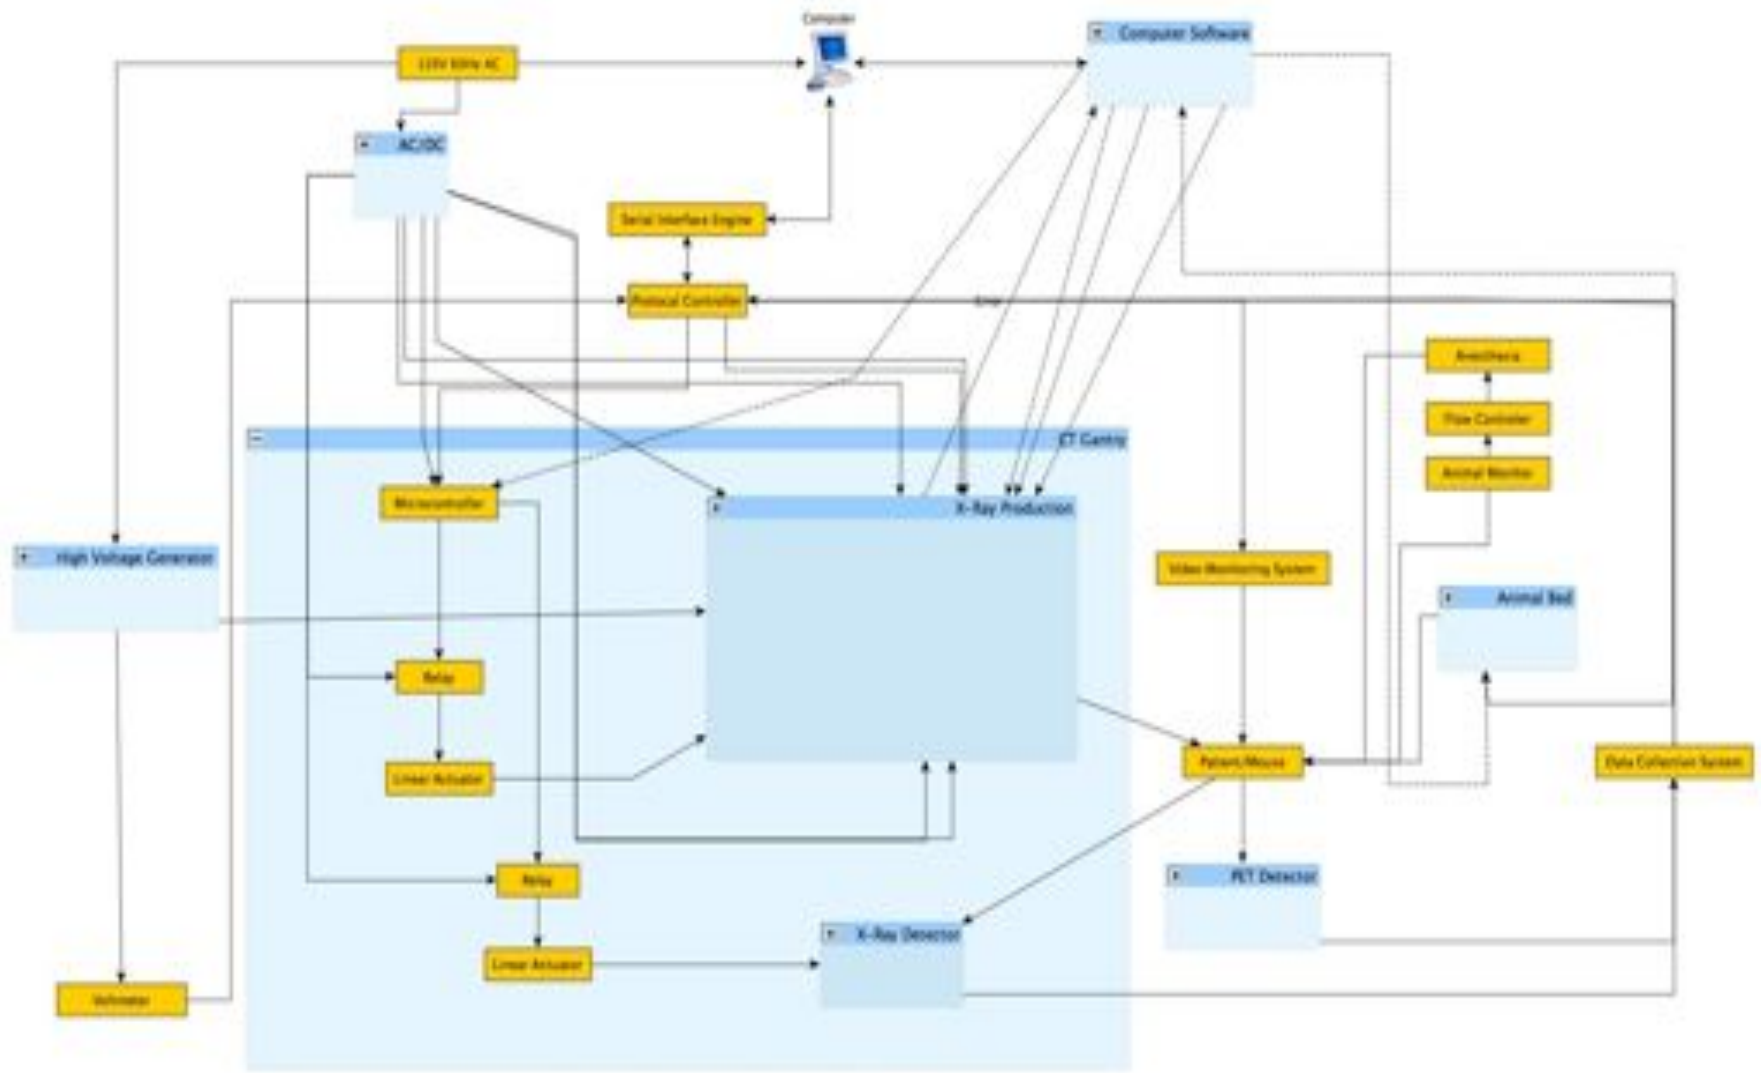

# Background-Project Plan

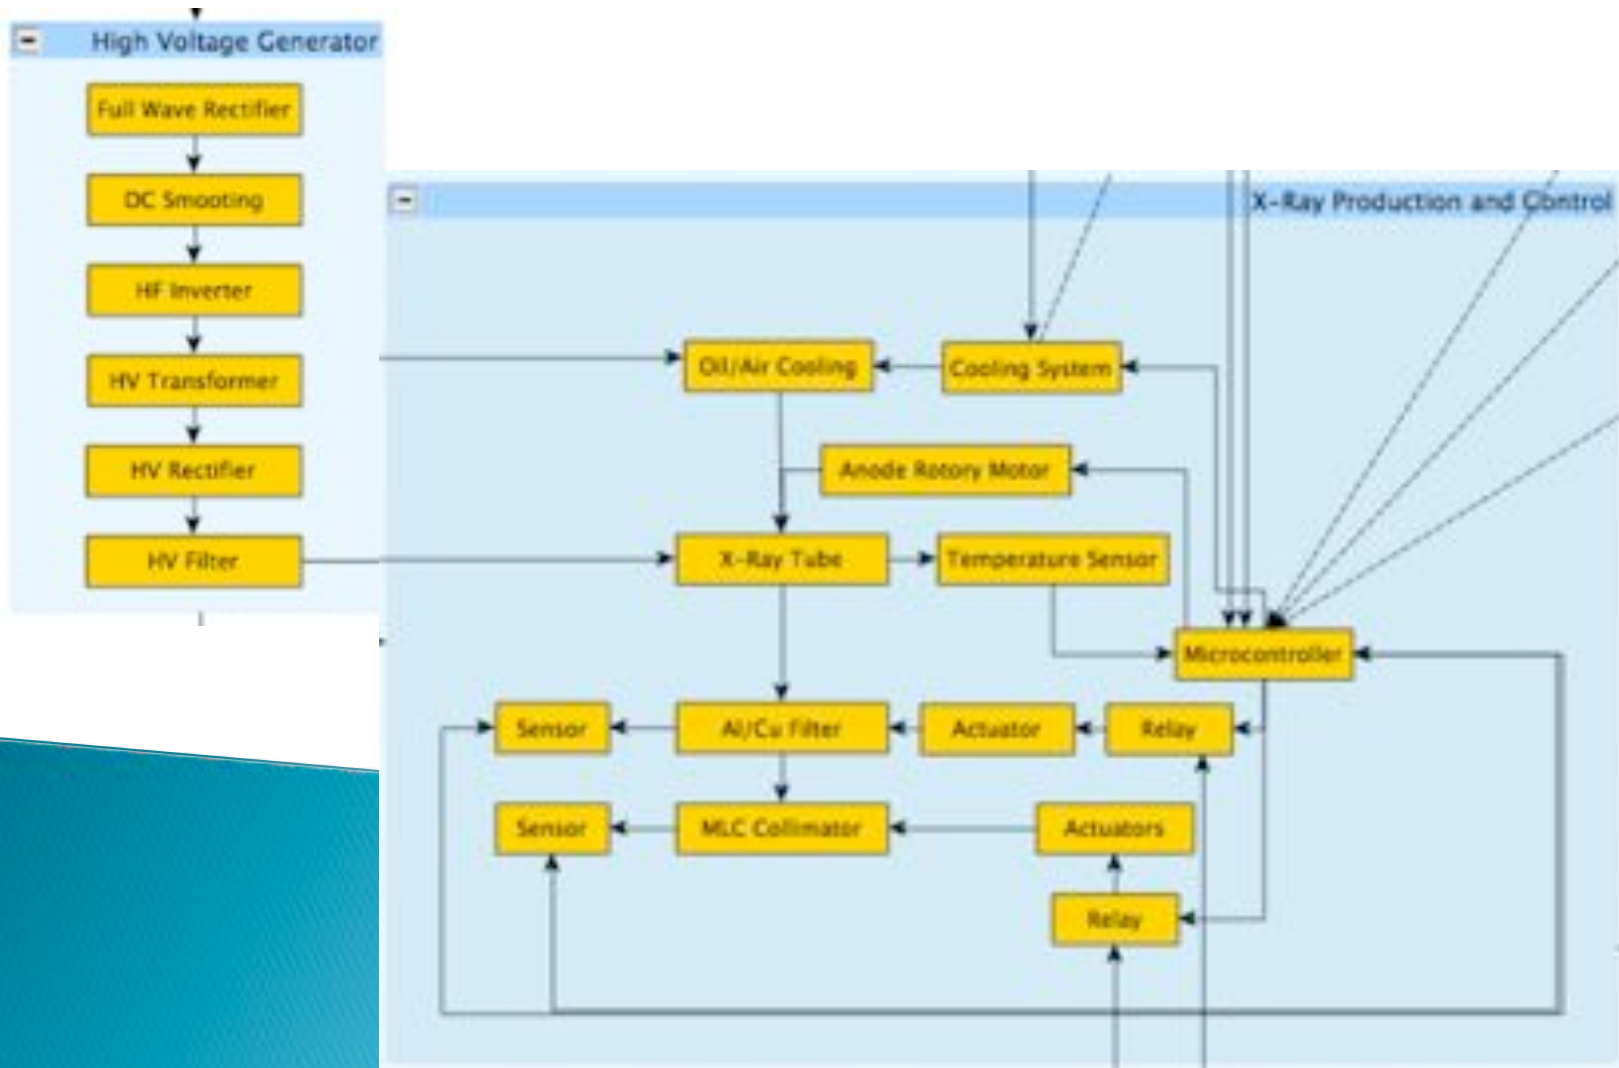

- Combination of CT, PET, and RT
- User-defined implementation
- Online database of parts
- Can order components and DIY
- Order pre-built from Morgridge
- Modularity

# System Design

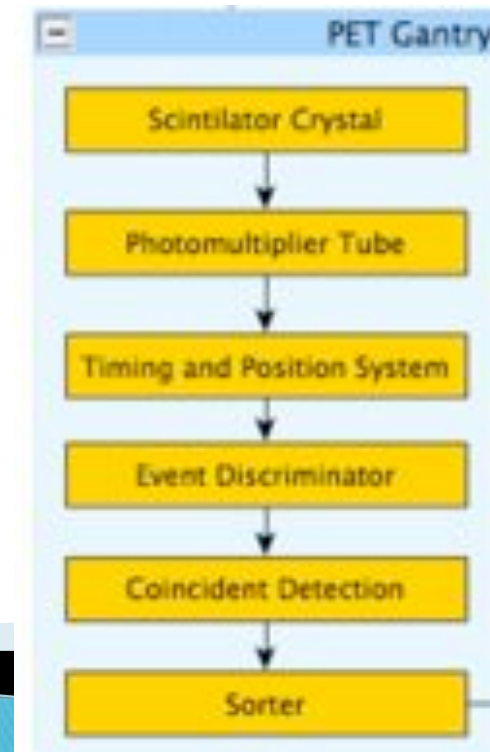

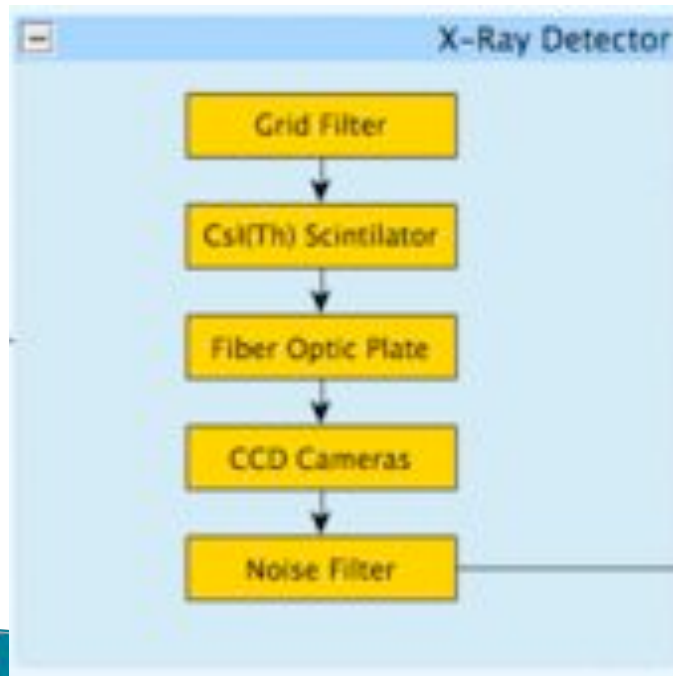

# High Voltage Generation and X-ray Production

# Detectors

## CT Camera Systems

# Design Matrix 1

	Weight	CCD	CMOS	Photodiode Array
Precision	40	32	25	20
Cost	10	7	5	5
Durability	25	20	20	20
Ease of Implementation	15	9	13	6
Speed of Operation	10	7	8	9
<b>TOTAL</b>	<b>100</b>	<b>75</b>	<b>71</b>	<b>60</b>

## X-Ray Scintillator Crystals

# Design Matrix 2

	Weight	Csi(Tl)	Organic Plastic	Nal(Tl)
Emission Maximum	25	23	21	18
Cost	10	7	4	7
Durability	15	12	14	7
Conversion Efficiency	25	20	18	23
Decay Constant	25	19	22	17
<b>TOTAL</b>	<b>100</b>	<b>81</b>	<b>79</b>	<b>72</b>

# Mechanical Design 1

- Physical Structure
  - 150 cm internal diameter for optimal imaging distances
  - Movable table that sets the animal table to 3 ft.
  - 100 cm gantry wheel to hold the components
  - 13 cm diameter clearance for the animal table and animal
  - Load bearing members must have suitable yield stress
  - Will design with A-36 Steel
  - Support rollers to keep gantry wheel spinning uniaxially
- Gantry Motor
  - Maximum of 10 revolutions per minute
  - Proper torque and gear ratio to spin 10,000 N (2250 lbs)
  - Precise position control

# Mechanical Design 2

# Timeline & Future Work

- Spring 2010
  - Research in underlying technology and specifications
  - Narrowing down to possible components
- Summer 2010
  - Developments in Open Source Medical Device (OSMD ) program
  - Market analysis
  - Gathering ISO standards, check intellectual property conflicts
- Fall 2010
  - Mechanical design of enclosure
  - Decisions for components
  - Find vendors for frame construction
  - Begin prototype assembly
- Future
  - Working prototype by December, 2011

# **Acknowledgements & Questions**
